Subject: M3677 – Castrol Enduron 5W30 Low SAPS

Dear Parts /Service/Branch Manager

MAN has now issued their recommendations for oils to be used in vehicles with the new Euro 6 engines. Please find attached a copy of the latest Technical Information on engine oils.

Euro 6 engines will need to use oil to MAN specification M3677, of which the ordering and supply details are noted below.

In order to keep the number of oils stocked by a dealer to a minimum, our recommendation is to eventually replace the existing M3477 oil spec (Castrol Enduron 10W40 Low SAPS) with the new M3677 oil specification.

We MUST continue to use M3277 (Castrol Enduron 10W40) in the D20/D26 EGR engine.

Summary

The two types of oil you should be aiming to stock in the future to cover all MAN engines are:

M3277 – Castrol Enduron 10W40

M3677 – Castrol Enduron 5W30 Low SAPS

For any further questions on the types of oil that should be used, please contact either your Regional Technical Manager or e-mail technical.uk@man.eu

Purchase of M3677 oil

Please find below the newly created part numbers for the M3677 Castrol Enduron 5W30 Low SAPS .

This oil has to be used for the new Euro 6 vehicles.

We would also like to inform you that our supplier Castrol is in the process of improving the availability of this product. This should be resolved by the end of January – please see dates below.
